VISCOUS SPACE

The offshore physicality of the North Sea between solid and liquid

The interdisciplinary conference invites researchers to develop a new perspective on the North Sea as an integral part of our historical urban realm and the site of unfolding urbanization processes.

How are processes of ocean urbanization reshaping our regional economic, social, cultural, and human environments both at sea and on land? Which tools, methods and frameworks can help re-conceptualize the sea-space and restore its cultural relevance?
